Dear teachers: Good morning, nice to meet you. It is my pleasure to have this opportunity for this interview and I hope I dan make a good performance today.

My name is Jiaxun Yang .I am from Nanchang University and majoring in software engineering.

Next, let me introduce myself from three aspects: learning ability, academic competition, research achievements, and hobbies.

First of all,undergraduate students must lay a solid foundation in professional knowledge. Through diligent study, My academic performance ranked in the top 0.8%.I won 7 honors such as special scholarship and national inspirational scholarship as the first class for two consecutive years. And I got an A score in 26 courses and with an average of 92 points in programming courses.

I started to participate in competitive professional competitions because of my outstanding advantages in programming. As the first author, I have won 7 national awards including the second prize of China's "AI+" Innovation and Entrepreneurship Competition.In 2019, I arrived in Beijing to participate in the Baidu Youth AI Maker Training Camp and Won the title of excellent camper.

I have a strong interest in scientific research, and have a deeper research on small obeject detection. And the research results I have obtained are: In 2020, as a second author (first tutor), I submitted a "A novel WSNs based on energy welfare function" in IEEE Systems Journal. In 2019, I set up a national university student innovation and entrepreneurship training project and applied for a national patent and software copyright.

I mainly had two scientific research project experiences. One was AnchorFitted: feedback-driven object detection anchor arbitrator.This arbitration model guides whether to modify anchor by making full use of the small object and the scale loss of anchor as the feedback information,which improved the detection accuracy of small objects.

In my spare time, I like playing basketball and fitness very much through which I can better meet the challenge.

Above all, Fudan University is my ideal place for further study! Finally, thank you very much for the teacher to listen to my self introduction.I sincerely hope you can give me a chance to study in your school.
